

NUTRITION AND PROPER FUELING FOR PERFORMANCE - WHAT YOU NEED TO KNOW AND DON'T KNOW TO ASK.

Vitamins and Minerals

Athletes are often confused about how vitamins and minerals work, thinking they provide energy. Because they do not contain calories, micronutrients cannot boost energy stores. However, they are crucial for turning food into energy through metabolic pathways. For example, many B vitamins aid in energy being released from carbohydrates.

Since athletes have high rates of energy metabolism and need their bodies to function at intense levels, they tend to have higher micronutrient needs than non-athletes. In addition, exercise stresses the metabolic pathways where vitamins and minerals are utilized and may also result in biochemical adaptations that increase micronutrient needs. Routine exercise may also speed up the turnover and loss of vitamins and minerals from the body. But how much additional vitamins and minerals do athletes need, and which ones?

Many athletes believe they do not get enough vitamins and minerals in their diet. The reality is that making wise food and beverage choices are crucial for peak performance and contribute to endurance and repair of injured tissues. A good working knowledge of foods that provide essential nutrients will aid in athletes reaching their greatest potential.

Athletes have increased energy needs, which allows for opportunities to obtain the nutrients they need through a balanced diet composed of a variety of natural foods. Most sports medicine professional agree that unless an individual has a nutrient deficiency, supplementation may not improve athletic performance.

Athletes should always choose food over dietary supplementation. However, an athlete should consult with their physician or other health care professional to determine whether vitamin and mineral supplementation is needed to maintain optimal health. The body needs more than 40 nutrients every day. Below is a table of nutrients that may be low in an athlete's diet:

Micronutrient Sources

SELECTED	B VITAMINS	CALCIUM	VITAMIN C	VITAMIN D	MAGNESIUM	SELENIUM	IRON
MICRO-							
NUTRIENTS							
VEGETABLES	LEAFY GREEN	Broccoli,	TOMATOES,		SPINACH,	GREEN	Spinach
	VEGETABLES,	KALE,	POTATOES,		ROMAINE	BEANS,	
	ASPARAGUS,	TURNIP,	Broccoli,		LETTUCE	BROCCOLI	
	CAULIFLOWER,	GREENS	RED PEPPERS,				
	SWEET		TURNIP				
	POTATOES,		GREENS,				
	MUSHROOMS		COLLARD				
			GREENS				
FRUITS	Dried	FORTIFIED	CITRUS FRUITS		PINEAPPLE,	Banana	RAISINS
	PRUNES,	ORANGE	LIKE ORANGES,		BANANA		AND DRIED
	BANANAS,	JUICE	GRAPEFRUIT,				APRICOTS
	ORANGE JUICE		AND				
			STRAWBERRIES				
GRAINS	WHOLE GRAIN	CORN	FORTIFIED	FORTIFIED	WHOLE	Spaghetti,	OATMEAL,
	BREADS,	TORTILLA,	BREAKFAST	CEREAL	GRAIN	RICE	SPAGHETTI
	CEREALS,		CEREALS				

	PASTA, RICE,	FLOUR			CEREALS AND		FORTIFIED
	TORTILLAS	TORTILLA			OATMEAL		CEREALS
DAIRY	LOWFAT MILK,	LOWFAT		LOWFAT	Yogurt	COTTAGE	
	YOGURT	MILK AND		MILK AND		CHEESE,	
		DAIRY		DAIRY		CHEDDAR	
		PRODUCTS		PRODUCTS		CHEESE	
MEATS	TURKEY,	SOYBEANS	Tofu,	Tuna,	ALMONDS,	LEAN BEEF,	RED MEAT,
EGGS	PORK,		SALMON	SALMON,	CASHEWS,	HAM,	DARK
NUTS AND	CHICKEN,			SARDINES,	PEANUTS,	CHICKEN,	MEAT,
BEANS	SALMON,			SOY MILK,	BAKED	TUNA,	POULTRY,
	TUNA, SOY			EGGS	BEANS,	NUTS	CHICK
					CHICK PEAS		PEAS,
							SHRIMP

Natural foods contain a matrix of various nutrients that researchers are continuing to discover and learn more about. Often individual nutrients don't work as effectively when isolated in a pill or supplement form. Athletes searching for a competitive advantage often look to a supplement or a special combination of nutrients to find it. However, there are no quick fix supplements for improving athletic performance. Consuming a wide variety of foods and staying well hydrated are the basic cornerstones of reaching athletic potential.
