

Body Fluid Clean Up

Any body fluid (blood, vomit, urine, feces) spill on the pool deck, locker rooms etc. must be promptly removed and the area cleaned. Proper personal protection, gloves, eye shields, face masks etc. must be available to all personnel responsible for this duty. The area that must be cleaned will be blocked so no other people will be walking near the area. Someone must be properly positioned to block off the area so swimmers, coaches, officials and pool personnel do not accidentally come in contact with the body fluids. Once the area has been cleaned, continued personnel blocking the area or signage may keep the area free from personal contact until the 20 minutes after the bleach cleanup has occurred.

Fact Sheet For pool staff/owners and health professionals

Cleaning Up Body Fluid Spills on Pool Surfaces

Body fluids, including blood, feces, and vomit are all considered potentially contaminated with bloodborne or other germs. Therefore, spills of these fluids on the pool deck should be cleaned up and the contaminated surfaces disinfected immediately.

Appropriate Disinfectants

Bleach

One of the most commonly used chemicals for disinfection is a homemade solution of household bleach and water. Since a solution of bleach and water loses its strength quickly, a fresh mixture should be made before each clean-up to make sure it is effective.

Other Disinfectants

A listing of other approved commercial disinfectants can be found at www.epa.gov/opad001/chemregindex.htm and www.fda.gov/cdrh/ode/gemmlab.html. These disinfectants are effective when used according to the manufacturer's instructions.

Recipe for Bleach Disinfecting Solution

9 parts cool water
1 part household bleach
Add the household bleach to the water. Gently mix the solution.

Clean-up Procedure Using Bleach Solution

1. Block off the area of the spill from patrons until clean-up and disinfection is complete.
2. Put on disposable gloves to prevent contamination of hands.
3. Wipe up the spill using paper towels or absorbent material and place in plastic garbage bag.
4. Gently pour bleach solution onto all contaminated areas of the surface.
5. Let the bleach solution remain on the contaminated area for 20 minutes.
6. Wipe up the remaining bleach solution.
7. All non-disposable cleaning materials used such as mops and scrub brushes should be disinfected by saturating with bleach solution and air dried.
8. Remove gloves and place in plastic garbage bags with all soiled cleaning materials.
9. Double-bag and securely tie-up plastic garbage bags and discard.
