

Kentucky Swimming Formula for Determining Championship Meet Time Standards

A four year rolling average of the (Nth) time of the previous 4 years' Championship Meet Psych Sheets will be used.

- Should the past year not provide a (Nth) place time for that seasons course, the present standard for that event from the past year will stand.
- Should the rolling average time be higher than the current time standard, the current time standard will stand.

The Nth time for the 12 & Under age group is 42.
The Nth time for the 13 & Over age group is 35.

This formula will be used for the LCM and SCY seasons. The two (LCM and SCY) standards will be combined into one official time standard sheet without conversion from one course to the other. LCM or SCY times can be used for qualification to a KY Swimming Championship meet.
